

The Ultimate Productivity Webinar Series #2: Labour Market Structure and Productivity Growth

Composition and allocation of labour according to skills in the production sectors largely influence the magnitude of productivity growth. The presence of large skill mismatch among graduates and heavy dependency on foreign labours may limit the productivity growth. The aims of this session are to discuss the linkages between labour market structure on productivity and suggest potential recommendations to improve the labour market conditions.

**20th Nov 2020
(Friday)
10.00am – 11.00am**
